

RTS UPGRADES

REVERBERATION TEST SYSTEM

GET ACCESS TO THE LATEST FUNCTIONALITY

The rapid evolvement of new communication standards requires a flexible, modular and upgradable OTA system. Our RTS-G5 (generation five) upgrade packages are designed to provide owners of earlier RTS OTA systems access to the latest productivity and functionality improvements. The fifth generation reverberation chamber is designed to reduce the time you spend on your measurements but also to add new types of measurements. The Flow software platform delivers full flexibility for the experienced user while, at the same time, introducing a new level of usability reducing the time to get productive.

FULL SYSTEM UPGRADE

The full system upgrade includes both RTS-G5 hardware and software. All HP700 and RTS60 chambers can be upgraded and the Bluetest Measurement Suite is replaced with our latest software platform Bluetest Flow. The upgrade will give you access to all the benefits of the RTS65 and help you stay on top of evolving wireless communication technologies. Chamber parts that may have been worn out over time will be replaced and new tools for managing your maintenance of the system are provided. A new mode stirring control system and new turntable solution are included to increase the flexibility of the system. The upgrade enables a higher antenna port count, as well as more DUT communication and power supply interfaces. The built-in measurement computer and touch screen integrated in the front rack combined with all the functionality in Bluetest Flow gives you the highest level of OTA flexibility and productivity available.

The RTSc and a 19" touch screen are delivered with your Bluetest Flow software platform upgrade of your current RTS chamber.

interruptions in your ongoing work. The Flow software upgrade gives you access to all new functionality in Bluetest Flow that your current hardware can support. Don't worry about your legacy configuration files or measurement results. You can import them to the new platform to quickly get started with already defined measurements and have all your results stored in one place. The software upgrade base package also includes the RTSc containing a measurement computer and the RTS60 control interface. A stand-alone touch screen running Flow Touch enables the full Flow ease of use experience.

SOFTWARE UPGRADE

Get access to the productivity and flexibility as well as the latest functionality enabled by the new software platform Bluetest Flow. Our software upgrade package allows you to transit from your current Bluetest Measurement Suite to Bluetest Flow platform with minimal

FLOW PLATFORM OVERVIEW

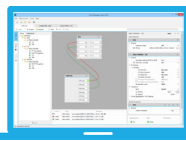

FLOW TOUCH

Flow Touch is a touch interface that can be used on any device with a web browser. Flow Touch allows you to control and monitor your measurements remotely. Start, stop and pause the measurements are just a few examples of the possibilities. Flow touch comes with the touch screen included in your upgrade.

FLOW MANAGER

Flow Manager is the desktop client in which you configure your measurements. You set up your measurements, create batches and add multi-parameter sweeps. Define your measurements as you want whether you are a beginner or advanced user. You are guided in Flow Manager by the built in manual.

FLOW ANALYZER

Flow Analyzer is the result and data processing tool that gives you endless opportunities to plot your data as you want. Search in the built-in database and compare your measurements. Create your own design for plots and graphs, put them in a report format and export your results.
